

### *Alzebra Blind swing gate*

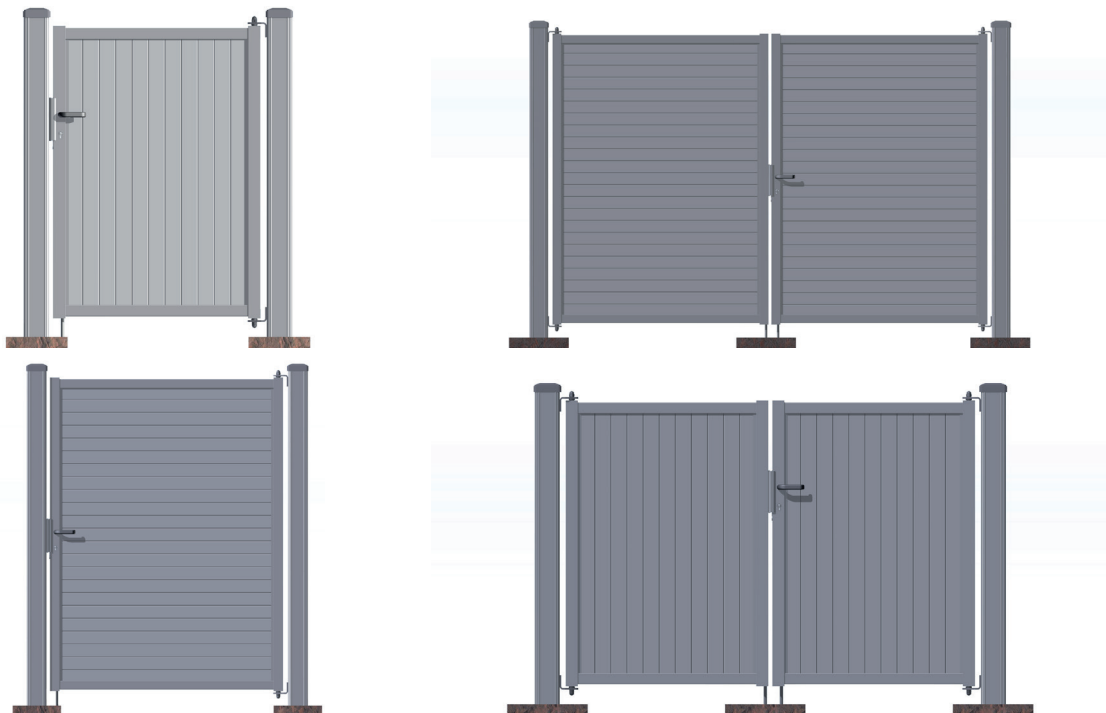

The Alzebra Blind swing gate is made completely of aluminum, making it highly resistant to corrosion and giving it a very long service life. It is also a lot lighter than a gate made of steel, making it easier to open and close the gate. Add the hinges with ball bearings to this and you get a gate that is very light to handle. The hinges are adjustable and allow the alignment of the gate wings. The gate can open at 180°.

The Alzebra Blind swing gate is available with one or two wings, in which one can choose to place the lamellae horizontally or vertically. The lamellae are concatenated, so your privacy is guaranteed.

The lock case with day/night locking system in combination with the solid ground bolts give the Alzebra Blind a reassuring protection against intruders.

# Alzebra Blind

## Posts

The posts of the Alzebra Blind swing gate are square aluminium tubes measuring 120/130/3 mm, equipped with an aluminium cover. The length of the post equals the height of the wing + ground gap + 80 cm.

## Frame

The frame of the Alzebra Blind swing gate is made of square aluminium tubes with rounded corners measuring 60/60/3 mm. The hinges are adjustable in all directions and allow the gate to be opened at 180°. For the filling of the wings one can choose between horizontal and vertical lamellae. The lamellae in the Alzebra gate measure 80/25/2 mm or 200/25/2 mm, and are placed with a tongue and groove system.

## Locking system

Integrated cylinder lock having a day and night lock, including 3 keys. 1 ground bolt per wing.

## Finishing

Pretreatment: degreasing, chemical scouring and chromatising. Then coated with a polyester powder coating in a standard Kopal colour. Other colours are available on demand.
