

Panofor welded steel mesh fence

Panofor is a welded steel mesh panel with a standard length of 2.5 meters that is constructed from vertical steel rods having a diameter of 5 or 6 mm and double horizontal rods with a diameter of 6 or 8 mm. These rods are welded together at every intersection, which results in a very sturdy mat.

The Panofor welded steel mesh panel is hot dip galvanized and polyester coated, which gives it an excellent protection against corrosion. The Panofor steel mesh panel is available in several standard colours from Kopal.

To place the Panofor welded steel mesh panels, square or rectangular poles are used, having special mounting clips that allow slight movement of the panel. This way, the poles can compensate for expansion of the panels under the influence of sunlight or temperature raises, so that the panels are free from deforming.

Panofor

Posts

Steel tubular posts with plastic cover. This post is optionally available with a sill at 45° and/or a base plate. The posts are galvanized and coated in a standard Kopal colour. For fixing the Panofor panels, one can choose between a premounted, plastic clamp with M8 insert, mounting with a plastic adapter and M8 bolt or naked post with shackle.

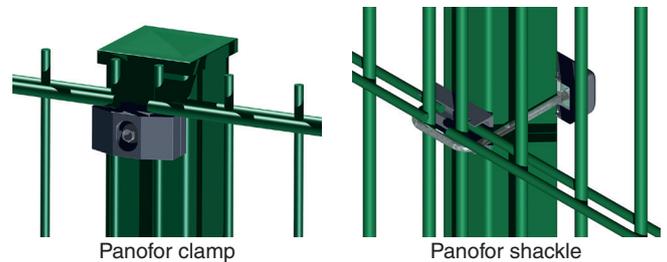

Panofor steel mesh

Steel mesh panel having a standard length of 2.5 meters and mesh size of 50 x 200 mm. The horizontal wires are doubled and have a diameter of 6 or 8 mm, the vertical wires are single and have a diameter of 5 or 6 mm. So, Panofor is available in 2 versions:

- Panofor 6/5/6
- Panofor 8/6/8

The steel mesh panel is chemically pretreated and has a polyester coating. The Panofor steel mesh panels are available in all standard Kopal colours. Other colours are available on demand.

STANDARD COLOURS	RAL CODE
