

Jungle sliding gate on rail

The Jungle sliding gate on rail is especially designed to be fitted into a fence built from Jungle bar fence panels, but it can also be integrated in any other fence type.

Because of its natural look the Jungle sliding gate fits perfectly in most environments. In both urban and natural environments, the gate looks completely in place.

The Jungle sliding gate on rail can be used for wider access to a maximum passage width of 12 meters.

The Jungle sliding gate on rail is available in all standard colours of Kopal. Other RAL colours are available as an option.

Jungle sliding gate

Construction

The Jungle sliding gate on rail has a lower beam of galvanized steel of 200/100/4 mm. The frame is built from steel tubular profiles of 60/60/2 mm, with horizontal beams of 60/40/2 mm. The filling of the frame is identical to that of the Jungle bar fence. The bars have a diameter of 22 mm and are placed at a maximum distance of 110 mm of each other (CE directive). The bars cross the upper beam by 200 mm. For the guiding of the gate 2 plastic wheels having a diameter of 180 mm are built into the lower beam of the gate wing.

Porches

The guidance portal and stroke portal are made of tubular profile of 80/80/2 mm on base for mounting on a concrete foundation. The guidance portal has two support wheels of resistant plastic on top. The stroke portal has a catch fork on top.

Finish

Galvanized and finished with a polyester powder coating. The thickness of the zinc layer is 275 g/m², that of the lacquer layer is minimum 80 microns. Available in the standard colours of Kopal, other RAL colours are available as an option.

Comments

For larger passages or high wind load, it is advised to provide a second guidance porch at 1.20 m from the first. It is therefore also important to order a longer gate wing.

Minor deviations (+/-10cm) in the horizontal lines of the gate and the Jungle fence may occur.
