

### *Bardo garden gate*

The Bardo garden gate has no mesh but has round bars instead. Therefore, the Bardo garden gate looks a lot sturdier than the other garden gates in the Kopal range.

The Bardo garden gate is essentially a lighter version of the industrial swing gates from Kopal. Thanks to the tunnel shaped horizontal profiles, the Bardo gate prevents dust accumulation on the wings, giving the gate a cleaner look.

The Bardo garden gate is placed on square posts, on which is placed a hinge system that allows the wings to rotate 180°. The Bardo garden gate is available with single or double wings in various sizes.

To lock the Bardo garden gate, one can choose between a bolt or a lock box with cylinder lock.

# Bardo garden gate

## Posts

The posts are made of steel profiles of 60/60/2 mm and are finished with a plastic cap on top. Each post has 2 adjustable hinges M12, made of stainless steel, that allow the wings to open by 180°. The length of the posts equals the height of the wing + the ground gap + 50 cm.

## Wings

The wings are made from steel tubes measuring 40/40 mm vertically and tunnel profiles measuring 40/35 mm horizontally. Between these, round bars having a diameter of 25 mm are welded. The distance between the bars is 12 cm a.o.a.

## Locking system

Lock box with cylinder lock having a day and night lock, including 3 keys. As an option, the wings can be equipped with a ground bolt.

## Finish

Galvanized and coated with a polyester powder coating in a standard Kopal colour. Other colours are available on demand.

Standard heights Bardo garden gate (m)	Standard widths single wing (m)	Standard widths double vleugel (m)
